

SCC3200A-1

Crawler Crane

320 Tons Lifting Capacity

Quality Changes the World

Max. lifting capacity: 320t

Max. lifting moment: 1820t·m

Max. boom length: 86m

Max. fixed jib combination: 62m+42m

Max. luffing jib combination: 62m+60m

The parameters, pictures and standard/optional equipment are only for reference in this brochure, the actual machine is based on the effective price list and contract.

Product Specification

Engine

- Model: Chinese Cummins (DCEC) QSL8.9-C325 diesel engine;
- Type: 4-stroke, water-cooled, vertical in-line 6 cylinders, direct injection, turbo-charger, intercooler, complied with European Non-road Tier III Emission Standard and Chinese Non-road Tier III Emission Standard;
- Displacement: 8.9L;
- Rated power: 242kW/2100rpm;
- Max. Torque: 1385N·m/1500rpm;
- Cooling system: temperature-regulated, pressure water circulation system;
- Starter: 24V-5.0kW;
- Radiator: fin type aluminum plate core;
- Air cleaner: Dry type system with main filter element, safety element and resistance indicator;
- Throttle: Grip type hand throttle, electrically-controlled;
- Fuel filter: Replaceable paper element;
- Batteries: Two 12V×180Ah capacity batteries, connected in series;
- Fuel tank capacity: 1050L.

Electrical Control System

- Self-developed SYIC-II integrated control system is adopted with higher integration, precise operation and reliable quality;
- Control system consists of power system, engine system, main control system, LMI system, auxiliary system and safety monitoring system. CAN BUS is used for data communication between controller, monitor and the engine;
- Monitor: the working parameters and status are shown on the monitor, such as the engine speed, fuel volume, engine oil pressure, servo pressure, wind speed, engine working hours, LMI data, ground bearing pressure, control handle function, alarm information, failure self-diagnosis;
- Remote Monitoring System: newly developed APP can collect equipment status at any time anywhere. Online functions such as smart maintenance reminder, failure alarm, construction data feeding, one-click service request, equipment health management are available, which makes the information more transparent and instant;
- Remote Control System: This is offered as optional function, all main mechanisms and assisting cylinders can be controlled through remote control box as an optional feature. The monitor can show data of engine and LMI to ensure smarter, easier and safer operation.

Hydraulic System

- Main pumps: electrically proportionate controlled open variable displacement piston pumps are adopted to provide oil supply for main actuators of main machine;
- Gear pump: one dual-gear pump for oil radiator motor and A/C motor control circuit;
- Control: main pump adopts load sensitive control; winch motor adopts limitless adjustable piston motor of variable displacement. The operating components are electrical control handle, one dual-travel electrically-controlled pedal to control various actuators proportionally;
- Way of cooling: air-cooled heat exchanger, fan core and multi-stage cooling;
- Filter: large flow, high precision filter, with bypass valve and transmitter, which can remind the user to replace the filter element in time;
- Max. pressure of system:
Main/aux. load hoist, boom/jib hoist, swing and travel system: 33Mpa;
Servo pressure: 3.5 MPa;
Hydraulic Tank Capacity: 500L .

Product Specification

Main and Aux. Load Hoist Mechanism

- Pump and motor: speed regulation through dual displacement pump. Winch counterbalance valve and anti-sliding technology on hook make sure the load lifting and lowering steadily;
- Winch brake: normally-closed, embedded, wet, spring-loaded disc brake is adopted to brake with spring force and release with oil pressure;
- A variable hydraulic motor drives the planetary gear reducer to control the load lifting and lowering of main hoist winches. A good inching performance is provided. The high-speed mode can realize main and aux. load lifting faster;
- Variable hydraulic motor can realize max. winch speed through automatic adjustment based on electricity flow;
- Choose high-quality spin-resistance wire rope to make sure high safety and longer service life;
- Fold-line machined drum provides high precision and good reliability, making sure the wire rope won't get messy;
- Choose the wire rope lug to make wire rope assembly easier and faster.

Main Load Hoist Mechanism	Rope speed on the outermost work layer	0~120m/min
	Wire rope diameter	26mm
	Wire rope length for main load hoist winch	650m
	Rated single line pull	15t
Auxiliary Load Hoist Mechanism	Rope speed on the outermost work layer	0~120m/min
	Wire rope diameter	26mm
	Wire rope length for aux. load hoist winch	390m
	Rated single line pull	15t

Boom/Jib/Hoist Mechanism

- Including: boom hoist mechanisms, jib hoist mechanism;
- Drums with folded-line grooves are adopted for all luffing devices. Hydraulic motor drives the planetary gear reducer to realize multiple composite actions and it is equipped with good inching performance.

Boom Hoist Mechanism	Rope speed on the outermost work layer	130m/min
	Wire rope diameter	28mm
	Wire rope length of boom hoist winch	345m
Jib Hoist Mechanism	Rope speed on the outermost work layer	100m/min
	Wire rope diameter	20mm
	Wire rope length of jib luffing winch	410m

Swing Mechanism

- Swing brake adopts wet, spring loaded, normally-closed brake, and braking through spring force;
- Swing system adopts integrated swing buffer valve and free slipping function, making sure the start and control is steady, and providing excellent inching function;
- Unique swing buffer design makes the braking more stable;
- Swing drive: external engaged swing drive with 360° swing range, and the max. swing speed is 1.0r/min. The max. drive pressure can reach 30MPa;
- Swing lock: cylinder lock can ensure the upperworks locked securely at four directions after work or during transport;
- Swing ring: three-row roller bearing.

Product Specification

Cab and Control

- Novel operator's cab with fashionable profile, nice interior and large window glass, which can tilt up by 20° to provide panorama view. There are low and high-beam lights, back-view mirror, heater and A/C, radio and other functions. The layout of seat, handles, control buttons are designed with ergonomic principles to make operation more comfortable;
- Cab layout: Integrated 10.4-inch touch screen, programmable smart buttons and optional vibration handle, and man-machine interaction interface are more improved;
- Armrest box: on the left and right armrest box are control handles, electrical switches, emergent stop and ignition switch. The armrest box can be adjusted along with the seat;
- Seat: multi-way and multi-level floating adjustable seat with unload switch;
- A/C: cool and heat air; optimized air channels and vents;
- Multiple cameras can present on the monitor at the same time to realize backing video, real-time monitoring of hook working, travel area, winch and wire rope reeving conditions.

Counterweight

- The assembled counterweight blocks are easy for self-assembly and transportation;
- The stacking mode of counterweight tray and blocks is used for easy assembly, disassembly and transportation;

Name	Quantity	Length	Width	Height	Unit weight
Carbody Counterweight	2	5.68	1.72	0.582	20
Rear Counterweight	14	2.68	2.38	0.49	8
Rear Counterweight tray	1	8.06	2.68	0.49	12

Upperworks

- High-strength steel weld framework, with no torsion or deformation. The parts are laid out in the way that is easier for maintenance and service.

Travel drive

- Independent travel drive device is used for each side of crawler. Straight line traveling and steering is driven by travel motor through reducer and drive wheel. Automatic machine direction switch is available;
- The travel system is configured with low and high speed options, which can travel as fast as 1.0km/h.
- Gradeability: 30%.

Travel brake

- Wet, spring loaded, normally-closed brake, braking through spring force and releasing through oil pressure;

Crawler tightening

- The jack is used to push the guide wheel and insert the shim to adjust crawler tension.

Steering system

- The machine is capable of turning with one crawler or in pivot.

Track pad

- High strength alloy cast steel track pad ensure long service life. They are 1200mm wide with a total of 79pads x 2.

Track roller

- Maintenance-free track rollers are used.

Jack cylinder

- Jack cylinders are designed to facilitate crawlers removal during job-site transport.

Product Specification

Boom

- The boom is a spatial lattice structure with equal section areas for inserts and tapered section areas for both ends. With tubes welded together, and boom tip and root strengthened with steel plates, it can better transfer the load;
- The length of the boom ranges from 20m base boom to the maximum length 86m;
- Composition: boom base 12m×1, transitional insert 7m×1, boom top 1m×1, boom insert 6m×1, boom insert 12m x5;
- Boom length varies from basic boom of 20m to max. length of 86m, increasing every 6m. The extension jib is mounted on the boom top.

Fixed Jib

- The fixed jib is a spatial lattice structure with equal section areas for inserts and tapered section areas for both ends. With tubes welded together, and jib tip and root strengthened with steel plates, it can better transfer the load;
- Fixed jib length varies from 13m to 42m, increasing by every 6m;
- Composition: jib top 6.5m, jib base 6.5m, jib insert 6m×1, 11.5m×2;
- The fixed jib length available is 13m, 19m, 24.5m, 30.5m, 36m and 42m; which can be mounted on boom length from 32m to 62m.

Luffing Jib

- The luffing jib is a spatial lattice structure with equal section areas for inserts and tapered section areas for both ends. With tubes welded together, and jib tip and root strengthened with steel plates, it can better transfer the load;
- Luffing jib length varies from 24m to 60m, increasing by every 6m;
- Composition: jib top 6m, jib base 6m, jib insert 6m×2, 12m×3;
- The luffing jib length available is 24m, 30m, 36m, 42m, 48m, 54m, 60m; which can be mounted on boom length from 26m to 62m.

Boom tip sheave block

- Weld structure, connected to the boom through pin, used for aux. hook.

Hook

- There are 7 types of hook blocks are available:

Name of Hook Block	Max. load weight	QTY	No. of sheaves	Unit weight (t)
300t hook block	300	1	11	5.7
260t hook block	260	1	9	4.8
200t hook block	200	1	9	3.7
160t hook block	160	1	5	3.0
100t hook block	100	1	3	2.1
50t hook block	50	1	1	1.7
16t ball hook	16	1	-	0.9

Note: The above-mentioned is full up configurations, and the actual configurations are based on the order.

Safety Devices

Assembly/Work Mode Control Switch

- Under the assembly mode, over-hoist limit switch, crane boom limit device and load moment limiter do not work, so as to facilitate the installation of crane;
- All safety limit devices work in the work mode.

Emergency Stop

- In emergent situation, this button is pressed down to cut off the power supply of whole machine and all actions stop.

Load Moment Limiter (LMI)

- It is an independent computerized safety control system. LMI can automatically detect the load weight, work radius and boom angle, and present on the display the rated load, actual load, work radius and boom angle. In normal operation, the LMI can make a judgment and cut off automatically if the crane moves towards dangerous direction. It can also perform as a black box to record the lifting information;
- It is composed of monitor, angle sensor and force sensor and other parts.

Over-hoist Limit Switch of Main/Auxiliary Hooks

- Over-hoist protection device comprises of limit switch and weight on boom top, which prevents the hook lifting up too much;
- When the hook lifts up to the limit height, the limit switch activates, buzzer sends alarm, failure indicator light starts to flash, and the hook hoisting action is cut off automatically.

Over-release Limit Switch of Main/Auxiliary Hooks

- It is comprised of activator in the drum and proximity switch to prevent over release of wire rope. When the rope is paid out close to the last three wraps, the limit switch acts, and the system sends alarm through buzzer and show the alarm on the instrument panel, automatically cutting off the winch action.

Function Lock Lever

- If the function lock level is not in work position, all the other handles won't work, which prevents any mis-operation caused by accidental collision.

Boom Hoist Drum Lock

- Pawl lock is used on boom hoist winch, which needs to unlock by switch before operation, in order to prevent mis-operation of handles and ensure safety during nonwork time.

Swing Lock Device

- The electronic lock, normally locked, shall be unlocked before operation, to avoid mis-operation.
- The cylinder locking device can lock the lowerworks and upperworks together, at for positions, front, rear, left and right.

Boom Limit Device

- When the boom elevation angle reaches the max. set limit, the buzzer sounds and boom action cut off. This protection is two-stage control ensured by both LML system and travel switch.

Back-stop Device

- The boom adopts back stop oil cylinder structure, the larger the compression is, the larger the back stop force. The maximum back-stop cylinder is 38t;
- There is a pair of mechanical back-stop device for luffing jib rear strut to prevent mast backing and tension rear strut pendant;
- When the boom to jib angle approaches the smallest angle, there is pneumatic back-stop device to prevent back tipping. The maximum back-stop force is 50t.

Boom Angle Indicator

- Pendulum angle indicator is fixed on the side of boom base close to the cab, so as to provide convenience to the operator.

Hook Latch

- The hook is provided with a baffle to prevent wire rope from falling off.

Safety Devices

Tri-color Load Indicator

- The load indication light has three colors, green, yellow and red, and the real time load status is presented on the display. When the actual load is smaller than 90% of rated load, the green light is on;
- When the actual load is larger than 90% and smaller than 100%, the yellow light is on, the alarm light flashes and sends out intermittent sirens;
- When the actual load reaches 100% of rated load, the red light is on, the alarm light flashes and sends out continuous sirens;
- When the actual load reaches 102% of rated load, the system will automatically cut off the crane operation in dangerous trend.

Audio-visual Alarm

- When the engine is working, the light flashes; when the machine is traveling or swinging, it sends out sirens.

Swing Indicator Light

- The swing indicator light flashes during traveling or swing.

Illuminating Light

- The machine is equipped with the low beam light and high beam light at the front of the cab, illumination light at cab, and other night lights, boom lights to improve the visibility during construction.

Pharos

- Pharos is mounted on the top of boom/jib to indicate the height.

Anemometer

- It is mounted on the top of boom/jib, and displayed on the monitor in the cab.

Electronic Level Indicator

- It displays the tipping angle of crane on the monitor in real time, protecting the machine from dangerous situation.

Seat Interlock

- Put down the function lock lever on the left side of cab seat or if the operator leaves the seat, all control levers will be de-activated to prevent any mis-operation due to accidental collision.

Engine Power Limit Load Adjustment and Stalling Protection

- The controller monitors the engine power to prevent engine getting stuck and stalling.

Engine Status Monitoring

- The engine status will be presented, such as engine coolant temperature, fuel volume, total work hours, engine oil pressure, engine speed, battery charging, voltage.

Monitor System

- Standard remote monitoring system provides functions such as GPS location, GPRS data transfer, machine operation status inquiry and statistics, operation data monitoring and analysis, remote diagnosis of failures.
